Guaranteed Income:
A window of opportunity to frame the narrative

Communications Research Summary:
Audiences and Messaging

April 2024
Outcome: Win a federal guaranteed income in 10 years via the GI Blueprint
Purpose:
The purpose of this combined (quantitative + qualitative) communications research is to understand how current and persuadable audiences can be identified and reached, to build a supportive public opinion environment for Guaranteed Income policies to be implemented.
Process:

1. Understand our potential audience, including what makes them likely or unlikely to support guaranteed income policies.

2. Understand the message frames, values, mindsets, policy parameters, messengers, and story strategies likely to expand and move our audience.

3. Define, segment and size supportive, persuadable, and skeptical audiences in support of GI in alignment with the values and frames researched.

4. **Use the research!** Input for policy design, a lever to build field capacity & a toolkit for strategic communications.
Qualitative

→ Research performed by Wonder + GSSR
→ 75 registered voters in Colorado, Georgia, Michigan, and Central/Southern Illinois.
→ Mix of online bulletin boards, focus groups, and in-depth interviews with oversampling for people of color.

Quantitative

→ Research performed by GBAO
→ n=6,000, US Gen Pop 18+ registered voters, national sample
→ Margin of error = ± 1.3 percentage points.
There is majority support for guaranteed income but it is not consistently defined as a concept.

There is a large swath of persuadable audiences on guaranteed income showing tremendous possibility for movement scale.

Persuadable audiences are not confined to traditional partisan ideologies and can be reached with values-based messaging.

To reach these audiences, we combine values-based messaging from trusted messengers and emphasizes pilot programs.

A focus on persuadable and select swing audiences, coupled with effective narrative techniques, will achieve the goal of building national majority support for GI.
Audience Insights
## Landscape

Voters are pessimistic about the overall U.S. Economy

<table>
<thead>
<tr>
<th>Issue</th>
<th>Very worried</th>
<th>Total worried</th>
</tr>
</thead>
<tbody>
<tr>
<td>There is too much wasteful government spending</td>
<td>61</td>
<td>91</td>
</tr>

<td>23</td>
<td>57</td>
</tr>
</tbody>
</table>
56% of voters believe the American Dream no longer exists.

Landscape

Voters are less pessimistic about their individual economic circumstances than the economy overall, but even among those doing well financially, the problem of economic precarity is widely recognized.
Insight #1

There is majority support for Guaranteed Income (GI)

56% of voters are supportive of GI

When asked: “Do you support or oppose establishing a Guaranteed Income in your area—regular monthly payments of about $500 that families can use on what they think is best for them, like food, gas, or to pay bills?”
Insight #2

GI is not consistently defined across the public and is largely misunderstood

➔ GI is not yet defined in an entirely partisan way
➔ Uncertainty around what GI is opens up knowledge gaps and reasoning chains where people default to pre-existing biases and negative tropes
➔ Respondents are easily swayed by messages on both sides
➔ Given viewpoint fragility, there is a first-mover advantage to defining GI

“People get paid for not working.”

“A standard amount given to all people by the government.”

“A minimum amount of regular income which a person can count on receiving to pay basic expenses.”
### Insight #3

When issues like GI are unfamiliar, audiences can fall into a number of psychological traps which drive opposition to GI.

<table>
<thead>
<tr>
<th>Psychological Trap</th>
<th>Broken reasoning chains</th>
<th>Upstairs vs. Downstairs brain</th>
<th>“In-group” vs. “Out-group”</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>What it is</strong></td>
<td>The trap of filling in gaps of understanding with misinformation based on their own lived experiences, biases, and other heuristics.</td>
<td>When the more primitive “downstairs brain” feels threatened or a sense of unfairness it can override the “upstairs brain” which governs empathy, compassion and morality.</td>
<td>The trap of preferring “people like me” and negatively stereotyping or “othering” those in the “out-group.”</td>
</tr>
<tr>
<td><strong>Example applied to GI</strong></td>
<td>For those unaware of Guaranteed Income, that Guaranteed Income will disincentivize work or lead to illicit spending.</td>
<td>Initial skepticism or opposition often invokes a cheating framework that denotes people gaming the system or using tax dollars for non essential/luxury illicit activities.</td>
<td>When audiences perceive Guaranteed Income as available to low-income individuals this forces a social comparison creating an outgroup.</td>
</tr>
<tr>
<td><strong>Potential strategies to counteract</strong></td>
<td>Success metrics from pilot studies, particularly measures of effectiveness and lack of waste – and consider coupling with payment technologies that help govern category spending (e.g., prepaid debit cards.)</td>
<td>Participants overwhelmingly expressed an interest in time limits on payments, upskilling, and/or limits on the types of permissible expenditures, acting as proxies for responsibility. (Note: Work requirements were not mentioned.)</td>
<td>Emphasizing the reach of “GI is available to all but the highest earners” and a variety of potential benefits like personal advancement and initiative and that GI is not a replacement for work.</td>
</tr>

- College men
- College Dems
- White men
- Amer Dream holds true

➔ MAGA should be deprioritized as a viable “swing” audience because this group lacks durability in their support and believes in less government

➔ Swing Dems: Less economically vulnerable at an individual level as “Base + Persuadables”

➔ Swing Republicans: Economically anxious Republicans share economic views of our “Base + Persuadables”; moderates show openness to a more expansive government role to address economic precarity
Narrative Insights
Insight #7

Persuasive comms blends the right message, messenger, and use of pilot program examples.

**Message**
- Enabling personal advancement and initiative
- Nurturing strong families
- Providing care for loved ones
- Strengthening communities

**Messenger**
- Non-political, third-party validators including:
  - local business owners
  - school counselors
  - Pediatricians
  - small-town mayors
  - and other types of local community leaders (pastors, chamber of commerce officials, etc.)

**Pilots**
- Pilots are the supporting evidence and add credibility
- Ease audiences discomfort around abuse and illicit spending, normalize GI as a mainstream popular idea for all but the highest earners
Insight #8

Messages that focus on elevating shared values around interconnectedness, shared community benefits, and hope are highly persuasive.

- **Enabling Personal Advancement & Initiative**
  - Effective interventions showed how Guaranteed Income is a tool to attain advanced education, support entrepreneurship, and allow for greater success at work – themes adjacent to the value of work; this frame generated hope and optimism and was straightforward and relatable.

- **Nurturing Strong Families**
  - Effective messaging interventions showed how Guaranteed Income helps to nurture strong families, reduce caregiver stress to make ends meet and give children what they need to thrive, resulting in benefits across the community; this is especially effective at connecting with women.

- **Providing Care for Loved Ones**
  - Effective interventions showed how Guaranteed Income helped people to manage moments of crisis due to unaffordable care or unplanned emergencies for loved ones; these were met with empathy and compassion by nearly all participants.

- **Inspire Hope**
  - Audiences that move toward becoming more supportive cite a feeling of hopefulness that their community will become better off as a result of Guaranteed Income.
Insight #9

Messengers are just as important as message in building understanding and support

- Non-political, community validators that are trusted messengers should both speak to the societal value of rising tides and credibly validate the benefits of Guaranteed Income—on both a personal and community level; multiple respondents lifted up a connection to faith without prompting

- GI participants are effective messengers when they mirror shared identities, lived experiences, and/or motivations and demonstrate how they would (or have) used the money in ways that align with our audience’s values and frames

- Change-of-heart stories mirror and acknowledge people’s concerns about Guaranteed Income

- Naming and acknowledging concerns about GI is important in calming potential resentment that people will abuse the benefit by not working or using the money for leisure or illicit activities

“...It [Guaranteed Income] could make a big enough difference in some people’s lives and I think back to how I had to start out with no help whatsoever, totally on my own. I don’t wish that on anybody, so if that [Guaranteed Income] was able to give people a better start in life, then yeah I could go for it.”

White man, Low-Income, Independent, Colorado
Insight #10

Specifics from pilot programs help calm concerns and reduce skepticism of GI

Curated details and stories from pilots were extremely persuasive for respondents such as: the amount of money provided, how the money was spent (groceries, bills) and by what means (pre-loaded debit cards vs. cash), evidence that these pilots did not decrease workforce participation

Diversity of pilots – that reflect smaller more rural towns, not just larger metropolitan areas – are effective at demonstrating how GI can work in different geographic contexts, and are already being implemented successfully

Aim for credibility and relevance, not stats. Results from pilots show that these programs can work in communities like mine, with people like me. They expand the “in group” vs. try to prove themselves with economic stats alone.

“[After seeing the spending breakdown in the FAQ] It is not being abused. People aren't using it for something that they don't need like alcohol, drugs, the vices.”

Hispanic man, Low-income, Democrat, Illinois
Insight #11

Existing messages around poverty alleviation, racial equity, and freedom will not drive increased support for GI

Anti-poverty themes do not appear to drive support for Guaranteed Income. Audiences expressed empathy for those in poverty, including those facing economic precarity, however – empathy was insufficient to move audiences to support.

Audiences do not organically make connections between Guaranteed Income and racial justice. This is equally true for participants of color and those with lower incomes.

The value of freedom and “no strings attached” elicits associations with “free money” as seen in opposition messaging today.

“People are going to be people. You’ve got some people that are going to use it for their betterment or their family’s betterment. Then you’ve got some people that are just going to waste it, not value it, because it was freely given.”

Black woman, High-Income, Democrat, Michigan
Insight #12

Referencing the pandemic can be a double edged sword when attempting to grow support for GI

(+) The pandemic as a whole can serve as an effective proxy for unexpected emergencies and economic precarity can happen to anyone, without warning.

(-) Pandemic relief era programs denote fraud, waste and abuse and heightened latent concerns around cash being taken advantage of by bad actors.

Use references to the pandemic sparingly and strategically to create a shared sense of individual economic precarity as it underpins support for GI.

“I think that people will be abusive towards the program. Money is going to run out. I don’t think the government has got that much money. Eventually, it could just be overwhelmed with a lot of applicants and people that are trying to apply. It is not going to be enough money to go around. I keep hearing in the news about the COVID, all the people that took advantage of COVID funds, about the billions of dollars that the federal government lost because of citizens that were abusive towards it.”

Hispanic man, Low-Income, Democrat, Illinois

“I feel like there was a lot of misappropriation of funds. There were a lot of people who wouldn’t have qualified if they did actual verification. And there were a lot of funds that can’t be accounted for. I’ve seen the story of a guy who qualified four times and got $4 million and hasn’t been heard from since. That is $4 million that could have been used to help other people.”

Black man, Low-Income, Democrat, Colorado
Insight #13

A strong investment in the “base + persuadables” and strategic targeting of select “swing” audiences through a tested narrative framework can win majority support for GI in the general public.

Fill this big glass just over halfway using a combination of supporters from the narrow glasses below.
Conclusion

This research forms the building blocks essential to growing support for GI in a significant way.
